

To whom it may concern

Herewith I confirm that **Magnus Ögren** during the last year has taken a **reading course in semiclassical physics** with me here at the University of Regensburg. I have taught him methods like extended Thomas-Fermi theory, EBK quantization, Poisson summation, the asymptotic evaluation of trace integrals, and many topics about periodic orbit theory.

Magnus has been an extremely motivated and fast learning pupil. The collaboration with him, which led to a publication in the Journal of Physics A **38** (2005) 9941-9967, has been a great pleasure.
